MicroSurvey® FIELDGenius®
For Android™

DECADES OF INNOVATION
NOW ON ANDROID

MicroSurvey brings decades of innovation and expertise in survey field software creation to our next generation multi-platform FieldGenius application. Customers will feel right at home in the familiar map driven interface and be instantly productive using their favorite workflows and features. Everything has been updated and improved. These enhancements will continue to provide users with the most intuitive survey software on the market, improving field efficiency and reducing training time while maintaining lower customer costs.

MULTI-PLATFORM

FieldGenius for Android will be the first iteration of a plan to provide customers with full range of multi-platform options. New versions of this next generation FieldGenius product are in the works for Windows and IOS devices. Our goal is to provide users with a choice on what hardware and platform to use. MicroSurvey is developing one application that will run on multiple platforms with the same look, feel and functionality.
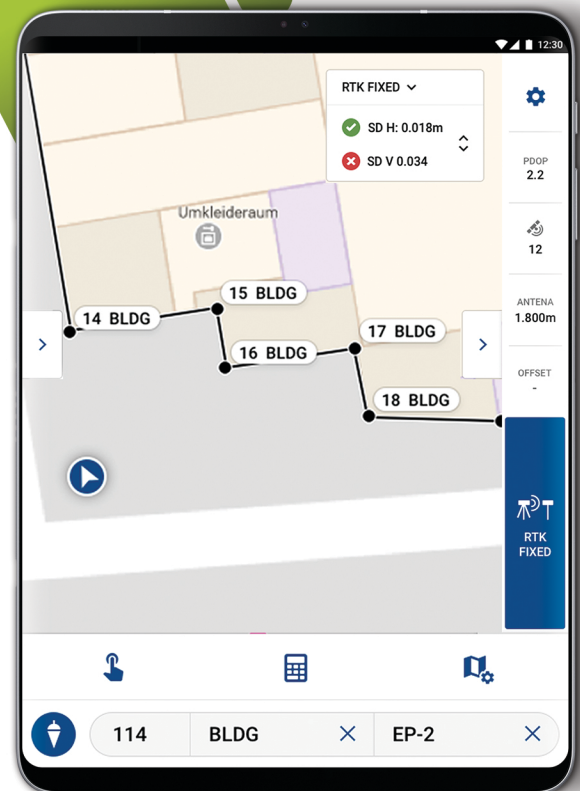

HARDWARE FREEDOM

With FieldGenius for Android you are not locked in to one hardware supplier. FieldGenius connects with GNSS receivers and Total Stations from dozens of different manufactures. With FieldGenius for Android, we will continue to support the widest possible range of survey instruments offered by manufactures around the globe. Hardware freedom means you can train staff on one field survey software package for use with a widest variety of instrument in your inventory.

SHARE INFORMATION

Users can update design or base map information for a site in one place and share it with all teams working at a site. FieldGenius for Android adds site and job information sharing. Future plans are to provide real time measurement updates between jobs at a site when a wireless internet connection is available. The goal is to streamline data management at a site so a crew can pick up a job and start working immediately with up-to-date information and task assignments. FieldGenius Android is being built with the future in mind.
